Toyota Hiace HIGH TOP 98-99 Models

Technical Information

4 cylinders, 2.4 litre unleaded petrol motor, 5 speed manual transmission. Fuel tank capacity 60 litres. Average fuel consumption at 100kms average is 14 litres per 100kms. Fuel economy will go to 20-23litres per 100kilometres. Engine oil: Multigrade 20W 50.

You will notice that the **radiator** cap is locked down. Please check the water through the plastic water bottle behind and under the driver's seat. Every third day when getting the fuel filled ask the service station attendant to check the level of water and coolant in the radiator. Most clients have trouble putting the radiator cap back on a hot motor. So please do not attempt it yourself.

The tyre pressure must be checked daily. The recommended tyre pressure for these vehicles are, front: 45psi (310kPa), rear: 45psi (310kPa).

The spare wheel is located under the rear of the vehicle and is only accessible from the outside of the vehicle, behind the rear bumper.

The tools required for changing your spare wheel (plus limited hand tools) including the jack are in the compartment near the step just inside the sliding door on the side of the van.

The cab chassis air conditioner works solely off the motor when it is running. The engine should not be left to run at idle to run this air conditioner.

Suitable for 2-3 persons. Cabin seats 3 people. AM/FM radio & cassette player. Dual battery system. Storage under seats.

Dinette converts to double bed, 1.9m long by 1.7 wide.

Bed in roof has a 17mm bed base board that's capable of holding a 97kg person who 187cm tall. We suggest a person of 187cm tall who weighs 80 kgs will be very comfortable in this bed.

The water tank holds 45 litres of fresh water. The container is located under the driver's side of the van. This container is not removable. The filler cap is located on the right side, beside the gas bottle compartment. The filler hose is located inside the vehicle. (Fill the tank slowly to let the air escape from the tank.

Water Pump. The vans are normally fitted with a manual hand pump. If the van is fitted with a pressurized pump make sure the pump is turned off at the switch when not in use.

The gas cooker has two burners on the top and one burner for a griller. Ignition is with a match. The gas turns to high and low. Make sure that the gas is turned off after cooking and not just turned to low.

The gas bottle is located in the gas bottle locker on the outside of the campervan. Please ensure that the gas is turned off when you are travelling. For safety turn the gas off at the bottle. Gas bottles can be filled at most gas stations as well as most camping sites.

The 55 litre fridge operates on dual power, 12 volt and 240 volt. The fridge will automatically turn from 12 volt to 240 volt when the van is plugged into external 240 volt power. To operate on 240 volt the van must be connected to a 240volt supply. The fridge should be turned on whilst driving.

Lights. There is a 240 volt light in the rear. There are 2 12 volt lights in the campervan.

Each vehicle is equipped with a **fire extinguisher** - Strictly for the use in cases of emergency. If they are discharged for any reason you will be held accountable. Please tell us if the fire extinguisher has been used so it can be refilled.

4 Berth Standard Motor Home 2001 - 2004 Models

Technical Information

Toyota Hilux Cab Chassis

2.7L 4 Cylinder Unleaded Petrol Engine. 5 Speed Manual Transmission Fuel Tank Capacity: Approx. 69L

The Fuel Consumption is approximately 13L Per 100km at a speed of 90 kilometres per hour. The fuel economy will go to 20 litres per hour when you drive the motor home at 100k to 120ks. We recommend that you drive at only 90ks an hour for safety and economy. Engine oil used for our motor homes is Multigrade 20w 50.

You will notice that the **radiator** cap is locked down. Please check the water through the plastic bottle. Remember that check the oil and water before you start to drive as the motor is cold and you will not burn your hands. Please check the water and oil every three days before you start your day's journey, or ask a service station attendant to do it when filling the vehicle with fuel. Most clients have problems in removing and replacing a radiator cap on a hot motor. So please do not attempt to do it yourself.

Vehicle Exterior Dimensions: Length: 5.1m, Height: 2.6m, Width: 2.0m Interior Height: 1.9m

The tyre pressure must be checked daily. The recommended tyre pressure for these vehicles is front 45psi and rear 55psi.

The spare wheel is mounted under the rear of the vehicle and is only accessible from under the rear of the vehicle under the back bumper.

The tools required for changing your spare wheel (plus limited hand tools) including the jack are behind the driver's seat.

The cab chassis air conditioner works solely off the motor when it is running. The engine should not be let run at idle to run the air conditioner.

This motor home is suitable **for 2 to 4 clients**. The cabin has three safety belts and seats 3 clients, and there are two seat belts in the rear for clients. There is an AM/FM radio and cassette player. Dual battery system. There is storage in the trunk area.

Double bed cab over is 1.95 long by 1.2m wide. The **dinette** converts to a double bed 1.95 long by 1.2 wide.

Trunk area for storage of suitcases size of 1.95 x 0.7m x 0.45m = 1.6m3. Hanging space in cupboard.

Microwave is a 240 volt microwave and is powered when the motor home is hooked up to the external 240 volt power source supplied in powered sites in campsites.

The water tank holds 45 litres of fresh water. The water tank is located under the motor home on the driver's side.

Water pump is a 12 volt pump and is located under the bonnet on the inner right hand guard. This is a pressurised 12 volt pump that gets it power from the auxiliary battery.

The gas cooker has two burners on the top and one burner for a griller. Ignition is with a match. The gas turns high and low. Make sure that the gas is turned off when you are finished cooking and not turned to low.

The gas bottle is located in the gas box locker on the outside of the motor home. Please ensure that the gas turned off when you are not using it. Please do not drive with the gas turned on. Gas bottles can be filled at most gas station as well as most camping sites.

The 55 litre Fridge operates on dual power.12 volt and 240 volt. The fridge will automatically turn from 12 volt to 240 volt when the motor home is connected to external 240 volt power. To operate on 240 volt the Motor home must be connected to 240 volt supply. Please not for the best use of your fridge turn it to 3 on the dial.

Lights. There are 12 volt and 240 volt lights in the motor home. They draw there power from the auxiliary battery and the 240 volt power source when it is supplied.

Fire Extinguisher. Each motor home has a fire extinguisher.
